

Official Breed Standard of the Kennel Union of South Africa

ROTTWEILER

BRIEF HISTORICAL SUMMARY

The Rottweiler is considered to be one of the oldest dog breeds. Its origin goes back to Roman times. These dogs were kept as herder or driving dogs. They marched over the Alps with the Roman legions, protecting the humans and driving their cattle. In the region of Rottweil, these dogs met and mixed with the native dogs in a natural crossing. The main task of the Rottweiler now became the driving and guarding of herds of cattle and the defence of their masters and their property. This breed acquired its name from the old Free City of Rottweil and was known as the 'Rottweil butcher's dog'. The butchers bred this type of dog purely for performance and usefulness. In due course, a first rate watch and driving dog evolved which could also be used as a draught dog. When at the beginning of the twentieth century, various breeds were needed for police service, the Rottweiler was amongst those tested. It soon became evident that the breed was highly suitable for the tasks set by police service and, therefore, they were officially recognised as police dogs in 1910. Rottweiler breeders aim at a dog of abundant strength, black coated with clearly defined rich tan markings, whose powerful appearance does not lack nobility and which is exceptionally well suited to being a companion, service and working dog.

GENERAL APPEARANCE

The Rottweiler is a medium to large size, stalwart dog, neither heavy nor light and neither leggy nor weedy. His correctly proportioned, compact and powerful build leads to the conclusion of great strength, manoeuvrability and endurance.

IMPORTANT PROPORTIONS

The length of the body, measured from the point of the sternum (breast bone) to the ischiatic tuberosity, should not exceed the height at the withers by, at most, 15%.

BEHAVIOUR AND CHARACTER

Good natured, placid in basic disposition, and fond of children, very devoted, obedient, biddable and eager to work. His appearance is natural and rustic, his behaviour self assured, steady and fearless. He reacts to his surroundings with great alertness.

HEAD

CRANIAL REGION

Skull - of medium length, broad between the ears. Forehead line moderately arched as seen from the side. Occipital bone well developed without being conspicuous.

Stop - well defined.

Facial Region

Nose - well developed, more broad than round with relatively large nostrils, always black.

Muzzle - the foreface should appear neither elongated nor shortened in relation to the cranial region. Straight nasal bridge, broad at base, moderately tapered.

Lips - black, close fitting, corner of the mouth not visible, gum as dark as possible.

Jaw/Teeth - upper and lower jaw strong and broad. Strong, complete dentition (42 teeth) with scissor bite, the upper incisors closely overlapping the lower incisors.

Cheeks - zygomatic arches pronounced.

Eyes - of medium size, almond shaped, dark brown in colour. Eyelids close fitting.

Ears - medium sized, pendant, triangular, wide apart, set on high. With ears laid forward close to the head, the skull appears broadened.

NECK

Of fair length, well muscled, slightly arched, clean, free from throatiness, without dewlap.

BODY

Back - straight, strong, firm.

Loins - short, strong and deep.

Croup - broad, of medium length, slightly rounded. Neither flat nor falling away.

Chest - roomy, broad and deep (approximately 50% of the shoulder height) with well developed forechest and well sprung ribs.

Belly - flanks not tucked up.

TAIL

In natural condition, level in extension of the upper line; at ease may be hanging or, alternatively, docked at first or second joint.

LIMBS

Forequarters

Seen from the front, the front legs are straight and not placed too closely to each other. The forearm, seen from the side, stands straight and vertical. The slope of the shoulder blade is about 45° to the horizontal.

Shoulders - well laid back.

Upperarm - close fitting to the body.

Forearm - strongly developed and muscular.

Pasterns - slightly springy, strong, not straight.

Feet - round, tight and well arched; pads hard; nails short, black and strong.

Hindquarters

Seen from behind, legs straight and not too close together. When standing free, obtuse angles are formed between the dog's upper thigh and the hip bone, the upper thigh and the lower thigh and metatarsal.

Upper Thigh - moderately long, broad and strongly muscled.

Lower Thigh - long, strongly and broadly muscled, sinewy.

Hocks – sturdy, well angulated hocks; not steep.

Hind Feet- slightly longer than the front feet. Toes strong, arched, as tight as front feet.

GAIT

The Rottweiler is a trotting dog. In movement the back remains firm and relatively stable. Movement harmonious, steady, full of energy and unrestricted, with good stride.

SKIN

Skin on the head : overall tight fitting. When the dog is alert, the forehead may be slightly wrinkled.

COAT

Hair - the coat consists of a top coat and an undercoat. The top coat is of medium length, coarse, dense and flat. The undercoat must not show through the top coat. The hair is a little longer on the hindlegs.

Colour - black with clearly defined markings of a rich tan on the cheeks, muzzle, throat, chest and legs, as well as over both eyes and under the base of the tail.

SIZE AND WEIGHT

Height at withers :	Males :	61-68 cm.
61-62 cm is small		63-64 cm medium height
65-66cm is large – correct height		67-68 cm very large.
Weight :		50 kg.

Height at withers:	Bitches :	56-63 cm
56-57 cm is small		58-59 cm medium height
60-61 cm is large - correct height		62-63 cm very large.
Weight (approx.)	:	42 kg.

FAULTS

Any departure from the foregoing points should be considered a fault and the seriousness with which the fault should be regarded should be in exact proportion to its degree.

General Appearance : Light, weedy, leggy appearance. Light in bone and muscle.

Head : Hound-type head. Narrow, light, too short, long or coarse head. Flat forehead. (Lack of stop or too little stop).

Foreface : Long or pointed muzzle; split nose; Roman nose (convex nasal bridge) or dish-faced (concave nasal bridge); aquiline nose; pale or spotted nose (butterfly nose).

Lips : Pendulous, pink or patchy; corner of lips visible.

Jaws : Narrow lower jaw.

Bite – Pincer bite.

Cheeks : Strongly protruding.

Eyes – light, deep set. Also too full and round eyes; loose eyelids.

Ears – set on too low, heavy, long, slack or turned backwards. Also flying ears or ears not carried symmetrically.

Neck – too long, thin, lacking muscle. Showing dewlap or throaty.

Body : Too long, too short or too narrow.

Back : Too long, weak; sway back or roach back.

Croup : Too sloping, too short, too flat or too long.

Chest : Flat ribbed or barrel shaped. Too narrow behind.

Tail : Set on too high or too low.

Forequarters : Narrow or crooked front legs. Steep shoulder placement. Loose or out at elbow. Too long, too short or too straight in upper arm. Weak or straight pastern. Splayed feet. Too flat or too arched toes. Deformed toes. Light coloured nails.

Hindquarters : Flat thighs, hocks too close, cow hocks or barrel hocks. Joints with too little or too much angulation. Dewclaws.

Skin : Wrinkles on head.

Coat : Soft, too short or too long. Wavy coat, lack of undercoat.

Colour : markings of incorrect colour, not clearly defined. Markings which are too spread out.

ELIMINATING FAULTS

General : distinct reversal of sexual type i.e. feminine dogs or masculine bitches.

Teeth – overshot or undershot bite, wry mouth; lack of one incisive tooth, one canine, one premolar or one molar.

Eyes : Entropion, ectropion, yellow eyes, different coloured eyes.

Tail – kink tail, ring tail, with strong lateral deviation.

Hair – definitely long or wavy coat.

Colour – dogs which do not show the typical Rottweiler colouring of black with tan markings. White markings.

Behaviour – anxious, shy, cowardly, gun-shy, vicious, excessively suspicious, nervous animals.

NOTE

Males must have two apparently normal testicles fully descended into the scrotum.
